My Child has **Autism Spectrum Disorder**
Many children with Autism have sensory processing issues. Bright lights, loud noises, and even uncomfortable clothing can cause my child to become overstimulated. My child may not respond to you like a typical child responds, and he/she may be volatile when upset. Because of this, my child may not be acting as well as he/she normally can.
Please be patient with my child and me, as I work to calm my child in this difficult situation.

This is my child's pediatrician/specialist. _____
Please feel free to call the doctor for more information about my child's condition.
Visit www.toolboxparent.com and www.autismspeaks.org for more information about Autism.
