My Child has **FASD** (Fetal Alcohol Spectrum Disorder).
Children with FASD have permanent brain damage caused by inutero alcohol exposure.
My child may have poor spacial boundaries and is vulnerable. Many children with FASD have sensory processing issues. Bright lights, loud noises, and even uncomfortable clothing can cause my child to become overstimulated. Because of this, my child may not be acting as well as he/she normally can. Please be patient with my child and me, as I work to calm my child in this difficult situation.

This is my child's pediatrician/specialist. _____
Please feel free to call the doctor for more information about my child's condition.
Visit www.toolboxparent.com and http://cdc.gov/ncbddd/fas/ for more information on FASD.
